

# United States Senate Committee on Energy & Natural Resources

Chairman Jeff Bingaman

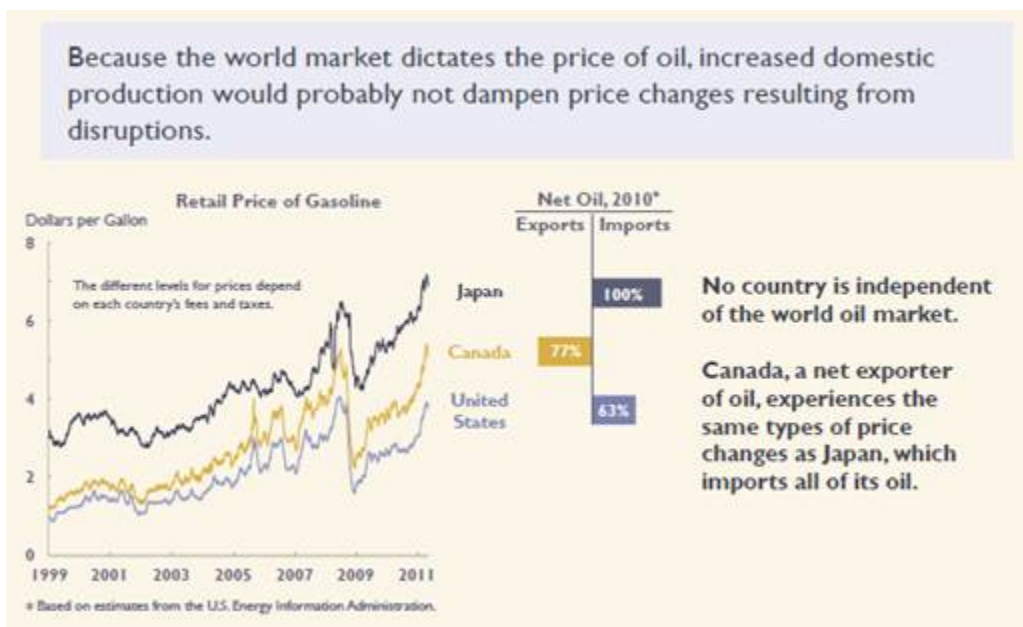

Democrat • New Mexico

Two of the graphics accompanying the report reinforce:

- Having less flexibility in the choice of fuels contributes to the volatility of prices for transportation fuels.

- Countries like Japan (mainly imports), Canada (mainly exports) and the U.S (mix of imports and exports) have very different oil portfolios. See the last page of info-graphic packet to show that they all experience the same oil price shocks, despite their different portfolios.
